## **I. Introduction**

Indonesia is one of the archipelagic countries where the majority of the population works as farmers around 31.8 percent (BPS, 2017). Until now, farmers are still someone who has contributed to providing food for all the people of Indonesia. Without the existence of farmers, food availability and food security in Indonesia will be threatened. However, ordinary farmers will find it difficult to

---

<sup>1</sup> Corresponding Author

meet food needs in Indonesia. These modern diera farmers should be able to become professional farmers. Not just farming just to meet personal needs but farming to be able to produce maximum production and can provide income for the family and increase foreign exchange.

Human resources play a very important role in the process of agricultural development without ignoring other factors. Agricultural development is inseparable from the contribution of farming communities who are more domiciled in rural areas, where the agricultural sector is the main support for their livelihoods and livelihoods. The very basic problems in rural areas are related to the powerlessness of the farming community itself both in terms of power to role, power over resources and power to expertise. Indonesia is an agricultural country, where the majority of their populations are farmers. In agricultural countries the agricultural sector is an important part of both the economy and the fulfillment of food needs. As an agrarian country, Indonesia's population with a livelihood as farmers is 31,705,337 people consisting of 24,363,157 men and 7,343,180 women (BPS, 2013 National Employment Survey).

It has been a long time since the Indonesian government tried to improve the standard of living of the peasant communities which constituted the largest portion of the structure of the Indonesian community. Various forms of programs have been implemented to help farmers to be able to have a higher bargaining position in the economy in Indonesia. Various forms of assistance have also been implemented starting from subsidizing Production Facilities, Direct Capital Assistance, Farmer Business Credit, and so on, whose numbers are very diverse. But the result is that Indonesian farmers are still low-income, still dependent on various assistances, and still think that they have not been able to move on their own in carrying out their farming business. Similarly, agricultural extension programs that have been running so far have not been able to optimally assist farmers in improving their standard of living, and have not been able to encourage farmers to find solutions to their own problems in carrying out their farming business (Mushero, 2008).

Realizing this, the government has issued a policy to revitalize education, and one of the strategies in the program is to empower farmers or farmer groups through a Joint Farmers' Group or The Association of Farmer Group. Through The Association of Farmer Group all the power possessed by farmers in their groups is combined to move the group. In other words, farmers in students are more independent by relying on their own strengths. In addition there is something more special in this program, namely the government wants to increase the status of farmers through their independence and creativity, because The Association of Farmer Group will be a clear legal status so that it has a higher bargaining power and is officially recognized as a business group. The Association of Farmer Group will have various forms of business permits, bank accounts, assets, notary certificates, and so on as a company. Besides that The Association of Farmer

Group is expected to be able to develop into a strong and independent farmer organization, so that The Association of Farmer Group becomes the empowerment of mainstay farmers from the current agricultural sector (Mushero, 2008). As for the provincial level, the person in charge of developing The Association of Farmer Group is the governor, while the person in charge of operations is carried out by the secretary of the Provincial Agricultural Extension Coordination Agency and is assisted by agencies or relevant agencies at the provincial level.

The Association of Farmer Group is a strategic institution that will summarize all agricultural institutional activities (Syahyuti, 2007). Although institutions have a strategic role, according to Soekartawi (2001), the institutional aspects, both formal and non-formal institutions are actually prominent aspects that can hamper the course of agricultural development in developing countries. This happens because there are still many unoptimal institutions in developing countries including Indonesia. Though institutions play an important role in the success of agricultural and rural development. The Association of Farmer Group agricultural institution is an important tool for running a program. However, the use of institutional stabilization strategies has experienced many inaccuracies and errors. The mistake so far has been to assume that institutional problems exist at a mere farm level, not in the superstructure, even though there may be problems with the implementation (Warsana, 2011). Because of the many problems in the The Association of Farmer Group institutional body, research is needed to analyze the concept of social capital in empowerment at The Association of Farmer Group.

The following is a list of names of farmer groups in Padangsidempuan City, namely: 1. Seia Sekata The Association of Farmer Group located in Panyanggar Village, Padangsidempuan Utara District, 2. Dewi Sri The Association of Farmer Group located in Panyanggar Sub-District, North Padangsidempuan District, 3. The Association of Farmer Group Serumbuk located on Jl. Aboin Hutabarat, District of South Padangsidempuan, 4. The Association of Farmer Group Gomos Jaya, located in Silandit Subdistrict, South Padangsidempuan Subdistrict, 5. The Association of Farmer Group Sauduran located in Kelurahan Sitamiang, South Padangsidempuan Subdistrict, 6. Agro Sentra The Association of Farmer Group located in Hutaimbaru Subdistrict, Padangsidempuan Hutaimbaru District Saroha Satahi located in Kelungananan Babungan Jae, Padangsidempuan Hutaimbaru District, 8. Salak Berduri The Association of Farmer Group located in the Palopat Maria Village of Padangsidempuan Hutaimbaru District, 9. The Association of Farmer Group Sabara Sabustak located in Singali Sub-District, Padangsidempuan Hutaimbaru District, 10. Cendana The Association of Farmer Group located in Sabungan Sipabangun Village Padangsidempuan Hutaimbaru Subdistrict, 11. Setia Karya The Association of Farmer Group located in Tinjoman Subdistrict Subdistrict in the National Hutaimbaru District, 12. Sepakat The Association of Farmer Group located in the Lubuk Manik Valley Sub-District in the District of Hutaimbaru, 13. The Association of Farmer Group Prima Tani located in Lubuk

Raya Sub-District, Padangsidimpuan Hutaimbaru Subdistrict, 14. The Association of Farmer Group Agro Prima located in Lubuk Raya Sub-District, Padangsidimpuan Hutaimbaru District, 15. The Association of Farmer Group Mulia located in Joring Lombang village, sub-district of Angkangsulu Angku Julu, 16. The Association of Farmer Group Suka Damai located in Simatohir village, Padangsidimpuan sub-district Angkola Julu, 17. The Association of Farmer Group of Inti Sari Alam located in the village of Pintu Langit Jae Padangsidimpuan Subdistrict Angkola Julu, 18. The Association of Farmer Group Maju Bersama located in Simasom village Angkola Julu District, 19. The Association of Farmer Group Bersama located in Batu Bayan village, Padangsidimpuan subdistrict, Angkola Julu, 20. Bina Tani Maju The Association of Farmer Group located in the village of Pintu Langit Jae Padangsidimpuan Subdistrict Angkola Julu, 21. Burangir Najombang The Association of Farmer Group located in the village of Baruas Padangsidimpuan Batunadua District, 22. United The Association of Farmer Group located in Purwodadi village Padangsidimpuan Batunadua District, 23. Baringin Marsada The Association of Farmer Group located in the village of Batunadua Julu Padangsidimpuan Batunadua Subdistrict, 24. The Association of Farmer Group Subur Tani located in the village of Pudun Jae Padangsidimpuan Batunadua District, 25. The Association of Farmer Group Suka Jadi is located in Palopat Pijor Koling village, Padangsidimpuan Southeast District, 26. Gapihan Farmer Dalihan Na Tolu located in Goti village, Padangsidimpuan Tenggara District, 27. United The Association of Farmer Group which is located in the Pijorkoling Sub-District of Southeast Padangsidimpuan District. (Source: Food Security Service and Livestock City of Padangsidimpuan in 2017).

From 27 farmer groups in Padangsidimpuan City, the researchers chose the Agro Prima Farmers Group Combined because the achievements obtained by The Association of Farmer Group Agro Prima included The Association of Farmer Group Agro Prima as the second place winner in provincial level The Association of Farmer Group in 2014, the first winner in the 2014 provincial level, second place in the group category community / community food reserve development at the provincial level in 2009, Champion II in order to award the Padangsidimpuan city level food security award, was chosen to be a participant in the National Jamboree event in Batu Malang in 2016 and training activities organized by the Padangsidimpuan city government This information was obtained by the researcher based on the results of interviews with the head of the Food Reserve Section at the Padangsidimpuan City Food Security Office, so researchers were interested in seeing how the implementation of social capital in Agro The Association of Farmer Group was prime so that this achievement is obtained.

## **II. Review of Literature**

### **2.1 Empowerment**

Many understandings of empowerment put forward by experts, all these meanings lead to how to improve the lives of the people to be more prosperous. Empowerment or empowerment, comes from the word power (power). Power in the sense of strength, in language dictionaries is interpreted as contributing time, energy, effort through activities relating to legal protections, giving someone or something power or agreement to do something, providing someone with the resources, authority and opportunity to do something, make things possible and feasible. Another definition of empowerment is giving energy so that the person concerned is able to move independently (Ambar Teguh Sulistiyani, 2004: 56-59).

Conceptually empowerment is an effort to increase the dignity of the people who are not able to escape from the trap of poverty and underdevelopment. In other words, empowering is enabling and empowering the community. According to Shardlow (2000) see that the various existing notions of empowerment essentially discuss how individuals, groups, or communities try to control their own lives and strive to shape the future as they wish. This principle supports the client to determine what he must do in relation to the efforts to overcome the problems he faces so that the client has full awareness and power in shaping the day ahead (Isbandi Rukminto Adi, 2008: 78-79).

In essence empowerment is the creation of an atmosphere or climate that allows the potential of the community to develop. This logic is based on the assumption that there is no society at all without having power. Empowerment must be the goal of all community development. Community development, however, can have simpler empowerment goals. Any increase in empowerment for the less fortunate part of the community will help to bring a more socially just society, and empower the structure-based members of the local community to be put in place. Likewise, any strategy that strengthens structures that oppose empowerment may actually weaken rather than strengthen community activities. When viewed more broadly, empowerment is often equated with the acquisition of strength and access to resources to make a living.

### **2.2 Empowerment of Farmer Groups**

The approach to community empowerment in development means that it is placed in the process of actors and beneficiaries of the process of finding solutions and achieving development outcomes. Thus the community must be able to improve the quality of independence to overcome the problems faced. Community empowerment efforts should be able to play a role in improving the quality of human resources (HR), especially in the form and increase people's behavior to

achieve a higher quality of life. Formation and change of behavior, both in sectoral dimensions, namely in all aspects or sectors of human life, dimensions of society which includes the range from material to non-material, time and quality dimensions, namely short to long term and increasing the ability and quality for its services, as well as the dimensions of the target, which can reach all levels of society.

Community empowerment is nothing but providing motivation and encouragement to the community so that they are able to explore their potential and dare to act to improve their quality of life, through means such as education for their self-awareness and ability. Empowerment of farmers is the efforts carried out in order to improve the ability of the agribusiness community so that they are able to independently develop themselves in doing business in a sustainable manner (Puspita, Dyah Ratna. 2012. Empowerment of Farmers through UNY Faculty of Education The Association of Farmer Group).

The concept of community empowerment basically means placing the community and its institutions as a basic force for economic, political, social and cultural development. Reviving various economic institutions of society. To be compiled and strengthened so that it can act as a locomotive for economic progress is a must to do. The people's economy will be built if the synergistic relationship of the various social and economic institutions in the community is developed towards the formation of the people's economic network.

Farmers who behave efficiently, modern and highly competitive. efficient behavior means thinking and acting and using production facilities in an efficient or effective manner. Modern behavior means following and being open to developments and innovations and changes that exist. Whereas high competitiveness is able to think and act and use production facilities on the basis of paying attention to the quality of their work. The idea of people's economic empowerment is an effort to encourage and protect the growth and development of local economic strength and mastery of science and technology.

### **2.3 The Association of Farmer Group**

The Association of Farmer Group is a combination of farmer groups that join and work together to increase economies of scale and business efficiency. The Association of Farmer Group is formed on the basis of (1) Shared interests between members; (2) Being in a farming area which is a shared responsibility among members; (3) Having management cadres who are dedicated to mobilizing farmers; (4) Having cadres or leaders received by other farmers; (5) Having activities that can be felt by most members; (6) There is encouragement or benefit from local community leaders.

The Association of Farmer Group is an economic institution in the countryside in which farmer groups join. The Association of Farmer Group as an institutional asset from the Ministry of Agriculture is expected to be fostered and guarded forever by all components of the agricultural community starting from the center, province, district / city to sub-district to be able to serve all the needs of farmers in the countryside. The Association of Farmer Group is classified into 3, namely:

### **(1) The Association of Farmer Group beginners**

The Association of Farmer Group was formed and prepared by a technical team as a program of the Ministry of Agriculture which has conducted training for management and The Association of Farmer Group management. After the training, counseling and PMT will be conducted with the intention and expectation of funds to strengthen business capital. Characteristics - Characteristics of beginner The Association of Farmer Group:

*a) The Association of Farmer Group can coordinate members to utilize funds for strengthening business capital in financing productive businesses in accordance with the proposal. Distribution of funds after being in accordance with the Joint Business Plan.*

*b) All members agreed to roll out funds in the form of savings and loans and had rules agreed upon and followed by all members of the community but were not optimal in organizing public funds in the context of adding assets.*

*c) Based on the indicators of The Association of Farmer Group performance evaluation, The Association of Farmer Group beginners are on a scale of values 0 to 105.*

The farmer group is formed on the basis of consciousness, so it is not forced. The farmer group wants the realization of good agriculture, optimal farming and prosperous farm families in the development of their lives. Developed members must be of the same view, are interested in the same and on the basis of family. Kartasapoetra (1994: 48) argues that farmer groups function as a means of preservation and the development of understanding, knowledge and skills as well as mutual support for farming of its members. The function is described in the following activities:

1. Procurement of cheap production facilities by making purchases together.
2. Procurement of resistant seeds to meet the interests of its members.
3. Work on integrated eradication or pest and disease control activities.
4. For the common interest, try to improve the infrastructure that supports its farming.

5. To use farming methods by holding demonstrations on how to grow crops, nurseries and how to deal with pests carried out with extension workers
6. Conducting joint processing of results in order to realize the best quality, variety and seek marketing together in order to realize uniform prices.

In general, the above explanation is a manifest function of a farmer group, while the latent function of a farmer group includes:

1. Indirectly where the interaction between fellow members of the farmer group is getting more intense, resulting in a high sense of solidarity with fellow members.
2. Means where farmers can carry out economic activities such as savings and loans between members.
3. Farmers' knowledge is increasing.

### **III. Discussion**

Empowerment of farmers meant by researchers in research is that farmers who are members of The Association of Farmer Group Agro Prima can empower themselves in making decisions and exploring their potential. The Association of Farmer Group is essentially not an institution with a new function at all, but is only an institution that can be chosen in addition to other institutions that also engage in direct economic activity. The Association of Farmer Group development is motivated by the fact that the weaknesses of group accessibility to various business service institutions, such as weaknesses in financial institutions, marketing institutions, agricultural production facilities and information sources. In principle, The Association of Farmer Group institutions are directed as an economic institution, but are also expected to be able to carry out other functions.

Since the establishment of Agro Prima The Association of Farmer Group has a role to empower farmer groups in the Lubuk Raya village. The function of The Association of Farmer Group in empowering farmer groups in its sub-district has been regulated in the bylaws that have been mutually agreed upon. According to Asia (2010), empowerment in farming communities includes:

1. Empowering farmers, namely changing the behavior of farmers from traditional subsistence farmers to modern farmers with business-oriented ideas.
2. Empowerment of farmer institutions by developing farmer institutions from farmer groups into a combination of farmer groups (The Association of Farmer Group), associations, cooperatives and corporations (business entities owned by farmers), as well as
3. Empowering farming businesses with the development of entrepreneurial spirit and cooperation between farmers and other related parties to develop their farming businesses.

From the results of interviews with the head of the Association of Farmer Group since the establishment of The Association of Farmer Group Agro Prima, the chairman of The Association of Farmer Group Agro Prima often got the opportunity to take part in trainings held by the regional government such as from the Department of Agriculture and the Agriculture and Extension Food Security Service. The knowledge obtained is usually in the form of agricultural technology development. From the training obtained by Mr. Edi Perlis Harahap, he always spread his knowledge to all The Association of Farmer Group members.

Providing training to groups is one form of empowerment carried out by The Association of Farmer Group Agro Prima. Providing training to farmer groups aims to foster knowledge and creativity in farmers both in managing their plantation land and utilizing garden produce to the maximum. This opinion is supported by the view that farmers as adults have self-concept, learning experience and readiness to learn so that their *sisimanus* and learning processes need to be put forward (Sadono, 2008).

With this training, it is expected to be able to increase the independence of the farmer group leader. Kutraningsih's (2014) study revealed that training had a very significant effect on increasing soybean production. Soybean production increases after farmers take part in training. The training has a positive effect on soybean production, both in the Cobb-Douglas and expanded production functions. So in this case the training has increased human resources through increasing the marginal product of the workforce. In accordance with the theory, that with practice will increase the value of resources, through increasing the marginal product of labor (Ehrenberg and Smith, 2005). Theoretically this situation is indeed expected. The further implication with this increase in soybean production is that the increase in marginal products from all inputs has a positive effect.

In fact, providing training to sustainable farmer groups. Even the training in the field of agricultural technology was not only accepted by the head of the farmer group, but also to other farmers who did not become members of The Association of Farmer Group Agro Prima but became members of farmer groups who were members of The Association of Farmer Group Agro Prima. Therefore many farmers who do not know or lack knowledge in the latest technology in agriculture become more knowledgeable.

The following is a statement from one of the members of the Saroha farmer group, Mr. Kombang Muda

*"Normally every routine meeting if the chairman runs out of training we are told what he gets from the training, like lately he has learned the new variety rice field demonstration plot he told us how to do it correctly, so we planned together that we want we practice in the field who is right. Natni, if I am*

*already working and I have succeeded, I also know that it is with my members who are not members of Agro Prima The Association of Farmer Group." (Kombang Muda)*

From the statement of Kombang Muda above shows the results that the training carried out by The Association of Farmer Group Agro Prima touched all farmers. With the training held by The Association of Farmer Group, farmers are developing and independent, moreover the education level of farmers tends to be low so that their knowledge is not sufficient to develop. With training given The Association of Farmer Group can make farmers empowered and independent if all elements participate in the success of their independence.

Sulistiyan (2004) states that training is part of empowerment can be interpreted as a process towards empowering, or a process to gain power/ability/ability, and/or the process of giving power/strength/ability from parties that have power to those who are lacking or not yet empowered.

Empowerment through regular meetings is one of the activities that bring together farmers in a certain period of time. Regular meetings conducted by farmers who are members of The Association of Farmer Group Agro Prima take place every 3 months or usually change quickly, ie once a month if there are things that want to be discussed according to the program they are running. In the routine meeting it will be a forum for farmers to provide guidance to members of farmer groups and exchange ideas, and make a consensus agreement and become a place to discuss matters outside of the ongoing The Association of Farmer Group program. With this routine meeting, it can create harmony and social solidarity between farmers so that it can refer to a collaboration in the relationships that are formed.

In general, Lubuk Raya in general, social solidarity will continue to be safeguarded from one generation to the next and is closely guarded by social control. Social solidarity is the strength of internal unity of a group and a state of relationship between individuals or groups based on moral feelings and beliefs that are shared with and reinforced shared emotional practice (Nasution, 2009: 7).

In solidarity empowerment activities are established among members of The Association of Farmer Group Agro Prima, while solidarity between management and members and administrators with administrators is also well established. solidarity that occurs between members and administrators is due to the continued realization of The Association of Farmer Group work programs for the community and farmers and also the even distribution of knowledge to The Association of Farmer Group members which creates a good feeling for the members. The consistency of the management made the members remain part of The Association of Farmer Group Agro Prima. This was confirmed by the statement of the head of the Satahi Saholoan farmer group. Mr. Timbul Harahap:

*"Almost all of the members who used to be members of Agro Prima The Association of Farmer Group still survive until now, even if there are those who leave, it is usually because he moved house so far if he wants to come here again. Moreover, we can say we often make meetings to discuss the development of the program. But even though it is no longer a member, sometimes it still wants to come for friendship."(Timbul Harahap).*

During routine meetings led by the chairman of The Association of Farmer Group always discuss the sustainability of the program so that if obstacles are found or things outside of the plan such as failure can be seen what is the problem and the solution. The following is the narrative of Edi Parlis Harahap when the researcher conducted an interview.

*"We always do evaluations so we know how they are progressing. The problem is that we have made a number of new varieties of demonstration plots several times, the results are not the same as the others, from this meeting we discussed together the possibilities that could occur like that. If you have got the cause, we can also tell other farmers so that they can be anticipated."(Edi Parlis Harahap).*

The strong coordination between administrators has also been in the spotlight for the solid collaboration between administrators. The continuity of real empowerment activities shows that there is good communication between administrators. This situation triggered a sense of concern for farmers towards The Association of Farmer Group, because among The Association of Farmer Group officials showed good communication.

This strong solidarity at Agro Prima The Association of Farmer Group is due to the fact that every manager and member has embedded the principles implanted from their ancestors, namely "hita do na accogot hita do na haduan". What can be interpreted in Indonesian is that we tomorrow we are the day after tomorrow with the intention of what we are doing today is for us tomorrow and for us who are after tomorrow whatever our current actions are for us in the future, both we do well we will get included for the next generation. Therefore, the management and members of The Association of Farmer Group Agro Prima always do the things they consider the best, because not only for themselves but also for their future grandchildren.

#### **IV. Conclusion**

The Association of Farmer Group Agro Prima is to provide empowerment to farmers so that they can develop and have advanced agricultural knowledge, so that it can foster creativity and innovation in agriculture, especially in the latest technology. The empowerment model with the provision of training aims to foster

knowledge and creativity in farmers both in managing agricultural land and utilizing agricultural products to the maximum. All training programs go well and touch up to farmers. So that farmers get new knowledge and experience that can improve their farm production. Empowerment through regular meetings is one of the activities that bring farmers together in a certain period of time. Regular meetings conducted by farmers who are members of The Association of Farmer Group Agro Prima take place every 3 months or usually change quickly, ie once a month if there are things that want to be discussed according to the program they are running. In the routine meeting it will be a forum for farmers to provide guidance to members of farmer groups and exchange ideas, and make a consensus agreement and become a place to discuss matters outside of the ongoing The Association of Farmer Group program. With this routine meeting, it can create harmony and social solidarity between farmers so that it can refer to collaboration in the relationships that are formed.

Aqro Prima yarandığı gündən Fermer Qrup Assosiasiyasına Lubuk Raya kəndində fermer qruplarını inkişaf etdirməsini tapşırıb. Aşağı bölgədəki fermer qruplarının inkişafı prosesində Fermerlər Qrupu Birliyinin rolu, Aqro Primada qarşılıqlı olaraq, razılaşdırılmış qanunlarla tənzimlənir.

Aqro Prima və Fermer Qrupu Assosiasiyası fermerləri kənd təsərrüfatında xüsusilə də innovasiya və yeniliyə təşviq etmək üçün bu istiqamətdə biliklərini inkişaf etdirməklə bağlı təlimləri təşkil edir. Təlimlərin inkişafı modeli həm əkinçilik ərazilərini idarə etmək, həm də kənd təsərrüfatı məhsullarından ən yüksək səviyyədə istifadə etməklə, fermerlərin daha bilikli olması məqsədini daşıyır.

***Açar sözlər:** Kənd təsərrüfatı, fermer, insan resursları, təlim, innovasiya, İndoneziya*

## РЕЗЮМЕ

**Ассоциация Фермер Групп как важный ресурс для развития фермеров в регионе Лубук Рай, Падангсидимпан, Индонезия**

С момента создания Агро Прима, Ассоциация Фермерской Группы играет важную роль в расширении возможностей фермерских групп в деревне Лубук Рай. Функция Ассоциации Фермерских групп по расширению прав и возможностей фермерских групп в ее подрайоне регулируется уставами, которые были взаимно согласованы. Ассоциация фермерской группы Агро Прима предоставляет фермерам возможности для развития сельскохозяйственных знаний, а также для стимулирования творчества и инноваций в сельском хозяйстве, особенно в области новейших технологий. Модель расширения прав и возможностей с предоставлением обучения направлена на развитие знаний и креативности у фермеров как в управлении сельскохозяйственными угодьями, так и в максимально возможном использовании сельскохозяйственной продукции.

**Ключевые слова:** Сельское хозяйство, фермер, человеческие ресурсы, обучение, инновации, Индонезия
